

El siguiente documento clasifica a los AA en base a 4 grupos con el fin de poder minimizar el Unknown Idle Time. Las métricas empleadas para la clasificación de los AA ha sido la siguiente:

- Stow Rate
- Porcentaje de Unknown Idle Time (también en Stow)

La clasificación en grupos se observa en el siguiente gráfico:

Se observa una tendencia lineal la cual indica que, a medida que los AA aumentane el rate en estación de Stow el porcentaje de unknown idle time sobre el total de sus horas trabajadas en stow disminuye.

G1: Corresponde al cuadrante (Sur-Este). AA modelo

G2: Corresponde al cuadrante (Norte-Este). Feedback Manager. Presentan rate superior a la media y como son conscientes de ello se ausentan más.

G3: Corresponde al cuadrante (Norte-Oeste). AA que necesitan reforzar ADAPT. No solo presentan rate inferior a la media sino que generar un unknown idle superior a ella.

G4: Corresponde al cuadrante (Sur-Oeste). Feedback de learning

GRUPO1

Finalmente se adjuntan dos Pie charts que vienen a explicar lo siguiente:

El primero de ellos representa el porcentaje de asociados que hay en cada grupo de clasificación mientras que el segundo gráfico representa, de todas las horas que se reconocen como unknown idle time, la fracción por grupo.

Con el objetivo de poder minimizar el unknown idle time, de manera que los top offenders de futuro se conviertan en los average actualmente, deberíamos trabajar con el 43% de los asociados (aquellos clasificados en los grupos G2 y G3), representando estos dos grupos el 51% de las horas en las que se comete idle.

Cabe destacar los asociados del grupo G2 ya que representan tan solo el 22% de la plantilla pero generan el 31% del Unknown Idle.
